

VERTICAL AUGER & ROTARY BLEND SYSTEMS

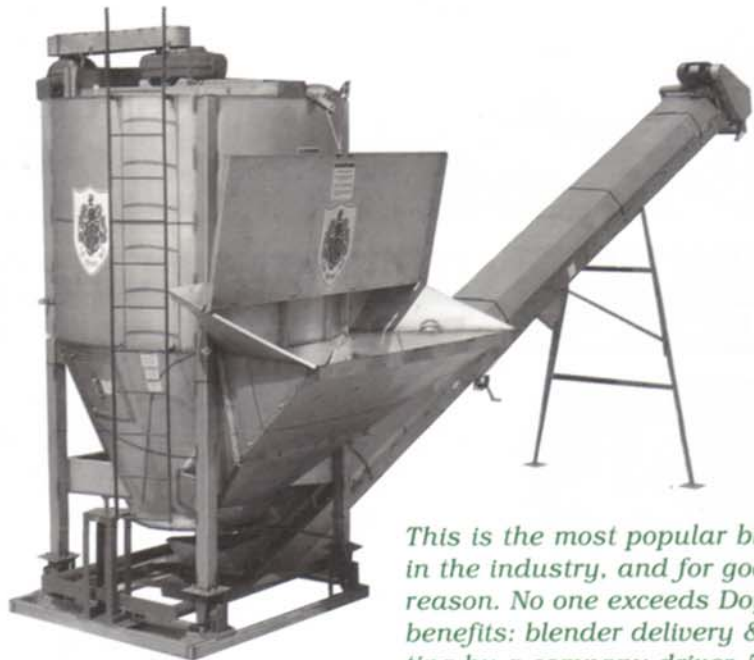

Doyle: The Blending Specialists

The Doyle family has been building top-quality blend systems and conveyors for three generations. By building a large volume of stainless products, they are the most efficient manufacturer of mixers in the United States. There are over 5,000 Doyle mixers in use around the world today.

In addition to mixers, Doyle manufactures a full line of stainless steel conveyors and bucket elevators.

Call today for assistance in meeting your mixing or bulk material handling needs. **You will be glad you did.**

Taper Screw Vertical Blend System

This is the most popular blender in the industry, and for good reason. No one exceeds Doyle's benefits: blender delivery & setting by a company driver, 5 year gear box warranty, and extra heavy duty construction.

Rotary Blend Systems

The classic Doyle Rotary Blend System has been in continuous production since 1961, with thousands built. No other manufacturer of fertilizer blenders has this much experience. They have put dozens of improvements into this system over the years, and are so confident in it that it has the best warranty in the industry. Built in 2, 5, 6, 8 and 10 ton capacities, they come standard with 24" wide Tri-Roll conveyors, plus a digital display with 3" tall numerals. Adding to all these benefits, Doyle offers factory delivery and system set-up.

Doyle Vertical Auger & Rotary Blend Systems

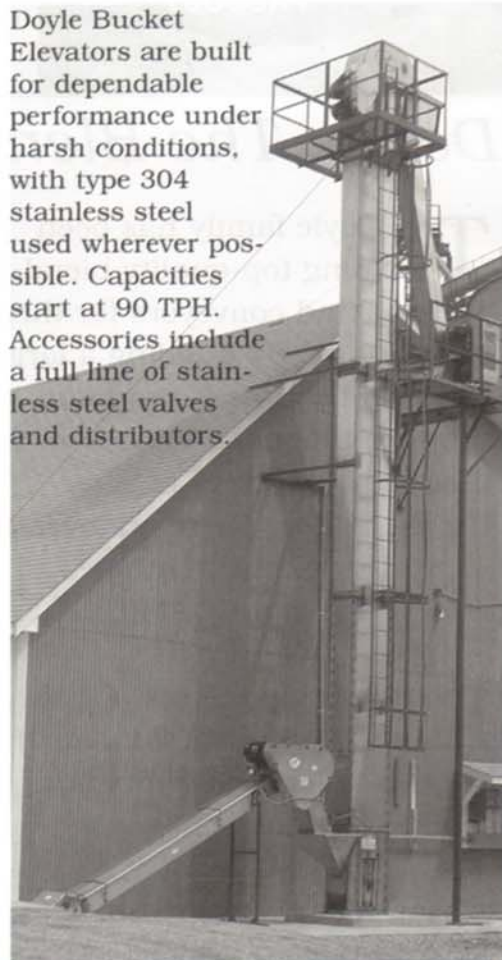

Undertrack Chainbelt Conveyors

Doyle Chainbelt Conveyors provide a fast, clean, user-friendly method for unloading trucks or rail cars. Manufactured in 12", 18" and 24" widths, they handle from 90 tons per hour and up. Let Doyle's skilled Engineers design one for your needs.

Bucket Elevators

Doyle Bucket Elevators are built for dependable performance under harsh conditions, with type 304 stainless steel used wherever possible. Capacities start at 90 TPH. Accessories include a full line of stainless steel valves and distributors.

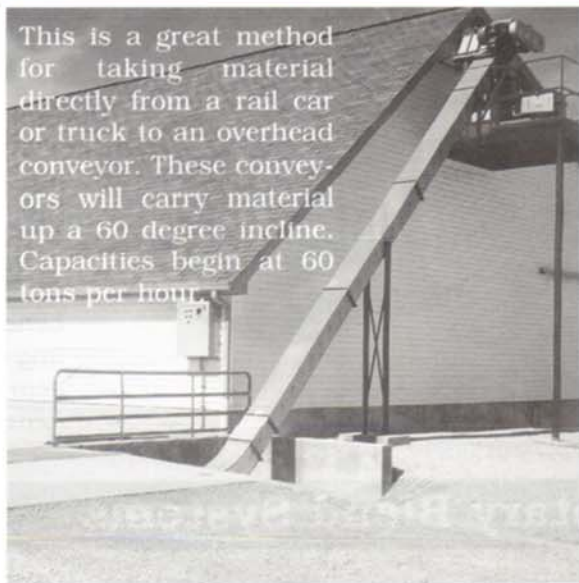

Blend Towers

Need to blend large volumes in a short period of time? You can't do better than a Doyle Tower—the industry's heaviest duty & most reliable tower.

Paddle Drag Conveyors

This is a great method for taking material directly from a rail car or truck to an overhead conveyor. These conveyors will carry material up a 60 degree incline. Capacities begin at 60 tons per hour.

Portable Conveyors

Whether you need a portable undercar conveyor or a long portable to fill a building, Doyle builds it, with capacities starting at 60 TPH.

Undercar Conveyors, 24" Shown.

Portable Tri-Roll Conveyors, 24" Shown.

Overhead Conveyors

Doyle offers Overhead Trough Roller conveyors, Trippers, Augers, and Paddle Drag conveyors.
